

ThermoLine™

Distributed Fiber Optical Temperature Sensing System (DTS)

The InnoSys ThermoLine™ DTS is an innovative solution for specific hazard applications applying the most advanced laser and fiber optic technologies. It provides thousands of temperature measurement points along optical fiber, which enables exceptional temperature monitoring not achievable through traditional multiple point-sensors.

Application

- Power Cable
- Power Stations
- Cable and Utility Tunnels
- Parking Garages
- Mass Transit Railway Systems
- Petrochemical and Oil Terminals
- Airport Terminals and Hangars
- Process Plants, Distilleries, Escalators
- Roof Tanks, Warehouses and Cold Stores
- Pipeline
- Road and Rail Tunnels
- Data Processing Centres
- Conveyer Belts
